Moreover, I am sociable, decent, honest, creative, and enthusiastic person. I have a good sense of humor and is always open to new ideas and projects.

HOBBIES

Sport, reading, driving, music, visiting other countries

ABOUT ME

For the last few years, my life has significantly changed. I was going to defend my PhD dissertation and to become an associate professor of my department. However, the war has made some corrections in this plan! I had to leave my job, my dissertation, and start earning money because the working conditions in my home city have greatly changed to the worse (Due to the war, the average salary has 2 times decreased and prices has twice increased).

As it turned out, earning money has nothing in common with number of diplomas and education in the University. The latter one can make you a good employee, but does not allow becoming wealthy and prosperous person. That is why I had to start learning by myself.

First, I have chosen the most interesting and suitable occupation for me – website development. Second, I have spent days and night learning HTML, CSS, JS, and WordPress. I am very grateful to guys from Codeacademy, Khan Academy, and WebForMySelf. They gave me a fundamental knowledge that allowed me to create my first websites. Third, I had to obtain some experience, so I chose Fiverr for this purpose. This awesome platform allowed me to start earning money and improve my programming skills. Also, it gave me a reputation of an honest hardworking developer who always delivers projects in time (you can check my testimonials at https://www.fiverr.com/uapatriot).

Nowadays, I do my best to create amazing websites, write articles and blogs, and sell various goods on Ebay. As for my freetime, I like spending it with my beloved wife.
